## About this guide

This guide provides advice for the creation of a bulk upload file to create small-scale technology certificates (STCs) in the REC Registry, in line with the *Renewable Energy (Electricity) Act 2000* and the Renewable Energy (Electricity) Regulations 2001.

The REC Registry is a secure internet-based registry system which facilitates the creation, registration, transfer and voluntary surrender of small-scale technology certificates (STCs).

This document provides details of the small generation unit (SGU) and solar water heater/air source heat pump (SWH/ASHP) bulk upload file specifications for the REC Registry, including information about all validations required in each column of the file. This document should only be used for small generation unit installations on or after 1 April 2022.

Included in this guide is:

- a description of the required file type, upload process and error handling process used by the REC Registry
- a data dictionary for SGUs and SWHs/ASHPs
- business rules which must be applied during the processing of bulk upload files for SGUs and SWHs/ASHPs, and
- the reference data that is required when registering SGUs and SWHs/ASHPs.

## Overview

Registered agents can create multiple small generation units (small-scale solar wind, and hydro) and solar water heaters/air source heat pumps by using the bulk upload functionality.

# Data specification

## File type

|                           |              |
|---------------------------|--------------|
| File type                 | CSV          |
| File extension            | .CSV         |
| Character set             | UTF-8        |
| Column delimiter          | Comma        |
| Text qualifier            | Double quote |
| Header row                | Required     |
| Maximum number of records | 250          |

## Upload process

The REC Registry allows registered agents to lodge SGUs and SWHs in bulk using the bulk upload functionality within the REC Registry by logging into the [REC Registry website](#).<sup>1</sup>

The steps to bulk upload small generation units are:

- Login to the [REC Registry website](#)
- Click on 'Renewable energy systems' and select 'Small generation units'
- Click on the 'Register bulk SGU' button
- Click the Choose File button under Upload S.G.U. csv file after 1 April 2022
- Select the bulk upload file and then click the 'Upload' button.

The steps to bulk upload solar water heater/air source heat pumps are:

- Login to the [REC Registry website](#)
- Click on 'Renewable energy systems' and then select 'Solar water heaters/air source heat pumps'
- Click on the button 'Register bulk SWH/ASHP'
- Click the Choose File button under Upload SWH/ASHP csv file
- Select the bulk upload file and then click the 'Upload' button.

---

## Error handling

The validation of the bulk upload file is performed in two stages:

- Structural validation (stage-1)
  - » File structure and file type (CSV)
  - » Number of columns
  - » Number of rows
- Functional validation (stage-2)
  - » All mandatory fields are provided
  - » Correct values are provided against reference data
  - » Validations against business rules
  - » The header row matches exactly with the field name in the data dictionary

All errors encountered during the processing of the file are displayed to the user.

The bulk upload is a binary operation, i.e. either the complete bulk upload is successful or it will fail as a whole. If during the bulk upload operation an error is encountered then the user is required to correct the bulk upload file and upload it again.

## Data dictionary

The data dictionary is divided into two sections:

- SGU – solar, wind and hydro fields: this table contains fields that are specific to SGU systems, and
- SWH/ASHP fields: this table contains fields that are specific to SWH and ASHP systems.

To help with the construction of the file, separate serial numbers have been used within the data dictionary tables for “solar, wind and hydro” SGUs and SWHs respectively. The serial numbers within the data dictionary represent the order of the columns within the bulk upload file.

The data dictionary uses the following typographical conventions:

- The Data type “Int” is for integers, i.e. whole numbers
- The Data type “Decimal(X,Y)” is for decimal numbers, where “X” is the total number of digits and “Y” is the number of digits to the right of the decimal place
- The Data type “Text(X)” is for character data that must have no more than “X” number characters and including white spaces. The default encoding is UTF-8. The valid sets of characters include Printable UTF-8 [32 to 126]
- The Data type “Date” is for calendar dates in the format DD/MM/YYYY
- The Data type “Select List” is for specific list of values that must exist within the defined reference data.

## Business rules

Below are general rules that apply to all bulk upload operations.

- All values specified are treated in a case insensitive manner.
- The bulk upload is an atomic operation, i.e. either the complete bulk upload is successful or it will fail as a whole.

### Business rules A: General

| Rule name                    | Rule                                                                                                                                                                                                                                                                                                                                                                                                 |
|------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Minimum Certificate          | SGU registrations and SWH/ASHP registrations must be eligible for at least one certificate                                                                                                                                                                                                                                                                                                           |
| SGU creation                 | Certificates must be created within 12 months of the installation date                                                                                                                                                                                                                                                                                                                               |
| SWH creation                 | Certificates must be created within 12 months of the installation date                                                                                                                                                                                                                                                                                                                               |
| PV Module                    | The SGU installation date must fall on or between the 'CEC approved date' and 'Expiry date' for the specified PV brand and module                                                                                                                                                                                                                                                                    |
| CEC Inverter                 | The SGU installation date must fall on or between the 'Approval date' and 'Expiry date' for the specified inverter manufacturer, series and model number                                                                                                                                                                                                                                             |
| Deeming Periods              | <p>Solar PV can be deemed for 14 years for systems installed from 1 January 2017 to 31 December 2017. This will reduce every year</p> <p>Wind and hydro systems can only be registered for one and five year deeming periods</p> <p>SGUs can only be registered for the remainder of the RET scheme. For further information on valid deeming periods please refer to the deeming period section</p> |
| Grid connected CEC installer | If the SGU system is grid connected, the installer specified must be accredited to install grid connected SGUs                                                                                                                                                                                                                                                                                       |
| Grid connected CEC designer  | If the SGU system is grid connected, the designer specified must be accredited to design grid connected SGUs                                                                                                                                                                                                                                                                                         |
| Stand-alone CEC installer    | If the SGU system is stand-alone, the installer specified must be accredited to install stand-alone SGUs                                                                                                                                                                                                                                                                                             |

|                                   |                                                                                                                                                                                                                                                                                                  |
|-----------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Stand-alone CEC designer</b>   | If the SGU system is stand-alone, the designer specified must be accredited to design stand-alone SGUs                                                                                                                                                                                           |
| <b>Rated power output</b>         | Solar: must be greater than 0 and less than or equal to 100kW<br>Wind: must be greater than 0 and less than or equal to 10kW<br>Hydro: must be greater than 0 and less than or equal to 6.4kW                                                                                                    |
| <b>Number of panels</b>           | If the number of panels is less than or equal to 1000, then they must match with the number of solar panel serial numbers                                                                                                                                                                        |
| <b>Accreditation code</b>         | The installer accreditation code provided must be valid at the time of installation                                                                                                                                                                                                              |
| <b>Serial number</b>              | All serial numbers provided must be unique                                                                                                                                                                                                                                                       |
| <b>Valid installation address</b> | The installation postcode and suburb must be a valid match according to the <a href="#">Postcode/suburb map</a> reference data<br><br>The installation address must be an Australian valid physical address in line with the address validation rules section                                    |
| <b>Valid owner address</b>        | If the owner address is in Australia, the owner postcode and suburb must be a valid match according to the <a href="#">Postcode/suburb map</a> reference data<br><br>The owner address in Australia must be a valid physical or postal address in line with the address validation rules section |
| <b>Valid installer address</b>    | The installer postcode and suburb must be a valid match according to the <a href="#">Postcode/suburb map</a> reference data<br><br>The owner address must be a valid Australian physical or postal address in line with the address validation rules section                                     |
| <b>Valid electrician address</b>  | The electrician postcode and suburb must be a valid match according to the <a href="#">Postcode/suburb map</a> reference data<br><br>The electrician address must be a valid Australian physical or postal address in line with the address validation rules section                             |
| <b>Valid designer address</b>     | The designer postcode and suburb must be a valid match according to the <a href="#">Postcode/suburb map</a> reference data<br><br>The designer address must be a valid Australian physical or postal address in line with the address validation rules section                                   |

## Business rules B: Address validation rules

The following table defines the validation rules that will be applied in the following circumstances:

- For the installation address, if there are more than 7 characters in the additional address information field when registering an SGU or SWH

| Address Type | Unit Type | Unit No. | Street No. | Street Name | Street Type | Town/Suburb | State | Postcode | Special Address | Other Rules               |
|--------------|-----------|----------|------------|-------------|-------------|-------------|-------|----------|-----------------|---------------------------|
| Physical     | -         | -        | -          | -           | -           | X           | X     | X        | X               | Special Address >=7 chars |
| Physical     | -         | -        | -          | X           | X           | X           | X     | X        | X               | Special Address >=7 chars |
| Physical     | -         | -        | X          | X           | X           | X           | X     | X        | X               | Special Address >=7 chars |
| Physical     | X         | X        | -          | X           | X           | X           | X     | X        | X               | Special Address >=7 chars |
| Physical     | X         | X        | X          | X           | X           | X           | X     | X        | X               | Special Address >=7 chars |

The following table defines the address validation rules that will apply in the following circumstances:

- If there are less than 7 characters in the additional address information field of the installation address when registering an SGU or SWH
- If the owner address is different to installation address
- If the address is the installer address
- If the address is the electrician address
- If the address is the designer address

**Note that an international address, where the country is “other”, can only be used for the owner address details.**

| Address type | Postal Delivery type | Postal Delivery No. | Unit type | Unit No. | Street No. | Street Name | Street type | Town/Suburb | State | Postcode | Country |
|--------------|----------------------|---------------------|-----------|----------|------------|-------------|-------------|-------------|-------|----------|---------|
| Physical     | -                    | -                   | -         | -        | X          | X           | X           | X           | X     | X        | Aus.    |
| Physical     | -                    | -                   | X         | X        | -          | X           | X           | X           | X     | X        | Aus.    |
| Physical     | -                    | -                   | X         | X        | X          | X           | X           | X           | X     | X        | Aus.    |
| Physical     | -                    | -                   | -         | -        | X          | X           | X           | X           | -     | X        | Other   |
| Physical     | -                    | -                   | X         | X        | -          | X           | X           | X           | -     | X        | Other   |
| Postal       | X                    | X                   | -         | -        | -          | -           | -           | X           | X     | X        | Aus.    |
| Postal       | X                    | X                   | -         | -        | -          | -           | -           | X           | -     | X        | Other   |

## Reference data

### Reference data A: General

#### Yes or No

| Yes or No |
|-----------|
| Yes       |
| Y         |
| No        |
| N         |

#### SGU System mounting type

| SGU System mounting type        |
|---------------------------------|
| Building or structure           |
| Ground mounted or free standing |

#### SWH Installation type

| SWH installation type                         |
|-----------------------------------------------|
| New building                                  |
| Replaced electric heater                      |
| Replaced solar water heater                   |
| First solar water heater at existing building |
| Replace gas water heater                      |
| Other                                         |

### SGU Installation type

| SGU Installation type |

## Reference data F: SPV data that forms part of the STC creation form

### Signed data package data that forms a portion of the REC Registry form for STC registration

The following fields (mandatory unless stated otherwise) are sourced from the Signed Data Package.

- Installation date
- System/panel brand
- System/panel model
- Rated power output (in kW) of your small generation unit
- Number of panels
- Equipment model serial number(s)
- Installation street number (not mandatory)
- Installation street name
- Installation street type
- Installation town/suburb
- Installation state
- Installation postcode
- Installation latitude
- Installation longitude
- Installer first name
- Installer surname
- CEC accredited installer number
- Retailer name
- Retailer ABN
